

When margins are squeezed, import some relief.

Nylon Insert Hex Lock Nuts

The compressive nature of nylon inserts in a nut assures the joint "stays put", even in harsh operating conditions. When industry conditions squeeze your margins, call on TRAMEC Fastener Service to provide relief.

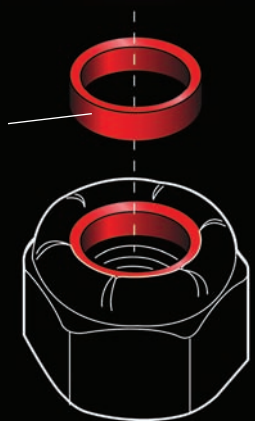

Drawing on years of international parts sourcing, TRAMEC maintains extensive inventories of a broad range of standard and PPAP'd Red Nylon Insert Lock Nuts in diameters ranging from #2 through 4 inch.

Standard and Metric thread locknuts are in stock, ready to provide relief to your compressed bottom line. When you need an engineered, fail-safe, fastener solution, TRAMEC is your conduit to more than 80 years of experience, embodied in facilities worldwide.

When things get tight, call TRAMEC for relief.

Compression force of nylon on bolt threads causes metal-to-metal contact.

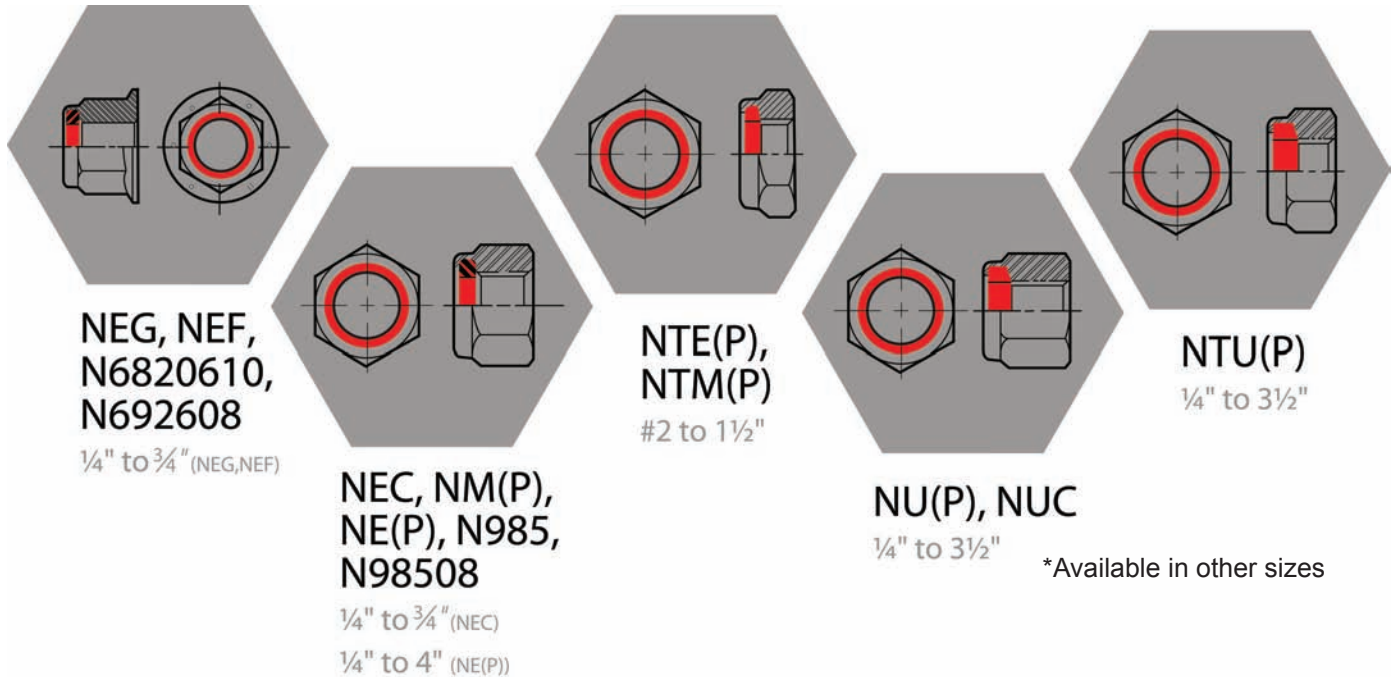

TRAMEC Fastener Services ... right from the factory

Nylon Insert Hex Lock Nuts

The most popular styles*

More than 80 years experience providing nylon insert lock nuts for every conceivable industrial application gives us the knowledge of what styles to stock. We routinely have multiple-case-quantities in the styles listed above.

Factory stock is also available to us and to our customers. We can also manufacture in a facility that minimizes shipping distances and costs,

or take advantage of economies of scale by extending already large OEM-quantity orders.

Most importantly, we can access the engineering and development staffs that created the products originally. Our corporate philosophy of solving customer's problems at a fair price, and on time, extends to more than products.
