

**Automatic Brake Adjuster  
Competitive Cross Reference**

# How to Identify an Automatic Brake Adjuster Using the **TRAMEC** Replacement Part Number System

Follow these steps to determine a replacement part number for an Automatic Brake Adjuster (ABA)

1. All **TRAMEC** OEM ABA part numbers begin with the letters "MB".
2. First, determine if an Auto-Check stroke indicator is desired. In this example no indicator is needed, so our part number is now "MB2....".
3. Next, check the gear/S-cam size. Measure the spline diameter as shown on the drawing below, in our example 1 1/2". Then count the number of splines (the drawing below has 10). In our case there are 28 splines, so our number is now "MB22...".
4. Identify the type of clevis and thread size from the list. Our example is the most common 5/8-18 straight, so we add the

5. number 1 to our part number "MB221..".
5. Is the application a standard straight or curved arm? Let's select a standard straight arm as illustrated below, so our part number becomes "MB2210".
6. Next we need the "arm hole length". Measure from the center of the splined hole to the center of the hole in the arm of the ABA, as shown in the drawing. Our part measures 5.5", so the last digit can be a "0" or "2". Either part number "**MB22100**" or "**MB22102**" will work as a replacement in our example.
