

Are You Still Repairing Receptacles the Old "Spaghetti Ball" Way?

You No Longer Have to "Re-Wire" the Nose Box When Replacing A Damaged Receptacle

Do It The Smart Way
With The New
SMART BOX

Instead of attaching all of the wires directly to the J560 receptacle, they are attached permanently in the bottom of the box - connected to a central outlet.

The replacement receptacle simply plugs in and secures with two fasteners - the wiring remains connected and undisturbed.

- No spaghetti ball of wires that might be damaged
- No mis-routed or mis-wired circuits
- No shorts or intermittent open circuits caused by loose connections
